Appendix VII

ANTHROPOMETRIC

In April 1938, by an arrangement with Dr. B. S. Guha, of the department of Anthropology of the Zoological Survey of India, a trained worker, Dr. B. K. Chatterji, came to Jubbulpore and during the course of some two weeks we made the usual measurements on 150 Kols : 127 men and 23 women. In the tables following the men are divided into two groups depending whether they belonged to the Rautiya or the Thakuriya subdivision.

The statistical results which follow were kindly compiled by Dr. C. Chandra Sekar, head of the Statistical Laboratory, Indian Statistical Institute. Dr. Chatterji is also working out a detailed analysis which at the date of printing is not ready for publication and inclusion here. However, it is hoped that this will appear separately later on and will give a full analysis of the measurements together with his observations on racial likenesses and affinities to other groups.

No detailed comparison with other groups is made here, nor are any theories of racial relationship advanced in respect to these measurements. They are recorded for the use of any who may find them helpful in making wider generalizations in relation to other anthropological data.

In addition to the tables the following general observations are taken from our notes :

1. *Skin Colour, (Von Luschan Scale).*
